Ask the Pharmacist
How Cuts and Scrapes Can Lead to Skin Infection

When to Call Your Doctor:

1. A bite, large cut, or deep puncture wound with any sign of infection at all

2. Skin infection that is growing in size despite cleaning and topical antibiotics

3. Red streaks near an infected area (looks like red lightening coming from the infected area)

4. Feel sick with fever or chills

5. The same kind of skin infection as another family member or close contact
